

Laubwerk Releases Conifers Kit

Plants Kit 5 comprises 10 temperate coniferous tree species. Moreover, all Laubwerk Plants Kits have been updated to version 1.0.12.

LAUBWERK

Potsdam (Germany), December 08, 2014: German digital botany software company Laubwerk today announces their fifth collection of render-ready, realistic 3D trees designed specifically for CG artists and architects. Moreover, Laubwerk has updated the Plants Kits to 1.0.12. The new Plants Kit 5 as well as the updates of Plants Kits 1-4 and of the Plants Kit Freebie are available immediately for 3ds Max, Cinema 4D, and Python (Windows).

[Plants Kit 5](#) is an impressive collection of temperate coniferous tree species planted in parks, gardens, or forests including excellent specimen trees for lawns such as eastern white pine, Japanese larch with good autumn color, and popular ornamental and live Christmas trees.

"One of the most amazing 3D software packs I had for years!" states Thomas Vournazos, architect, awarded 3D visualizer and founder of Slascube. Thomas has been beta-testing the new Plants Kit 5. "The amount of detail, realism and variation is unique. Above all, the way the software is structured gave me a great deal of flexibility that makes a huge difference when composing a scene of that complexity."

Highlights of the 1.0.12 update are:

- A faster Laubwerk Browser.
- On Cinema 4D, e.g. added Czech localization for both the Plugin Player and all Plants Kits.
- On 3ds Max, e.g. added support for Corona Renderer.

Read the full list of improvements and fixes here: <http://www.laubwerk.com/products/release-notes>.

To get the update, sign in to your Laubwerk Account Page download a fresh installer of your Plants Kit. Windows users are advised to uninstall previous versions of the Laubwerk Player plugin before running the new installer.

Laubwerk Plants Kits allow 3D artists and architects to insert photorealistic tree models into their 3D scenes quickly and easily, without the usual slow downs due to overly complicated parameters or excess memory usage.

Laubwerk accomplishes this goal by giving users just the right amount of variation in their 3D tree models, without overwhelming the user or their computer. Each tree model comes in 3 shapes, with 3 ages, and 4 seasons per shape. Adjustable level of detail settings means that each tree looks great without slow navigation or long rendering times.

All Laubwerk Plants Kits are each available for 149 Euro (w/o VAT) at laubwerk.com/store and selected [resellers](#). The Plants Kit Freebie is available for download at the Laubwerk Store, too.

About Laubwerk GmbH

Founded in 2010, Laubwerk is a Berlin-born, Potsdam-based CG software company that offers fast and fluent solutions for architects and CG artists requiring 3D plant models while working with popular 3D software platforms. Laubwerk sets new technical and quality standards with authentic-looking plants that require minimal time and effort while offering maximum detail and control. (www.laubwerk.com)
